

DIGITAL RETINAL IMAGING

Normal

Diabetic Retinopathy

Macular Degeneration

Retinal Detachment

We at The EyeDoctors are proud to provide our patients with one of the latest technologies available today for the examination of your eyes.

Digital Retinal Imaging allows your doctor a more comprehensive way of viewing the inside of your eyes and, in some cases, **you may not need dilating drops!**

This advanced diagnostic test is invaluable in detecting **glaucoma, macular degeneration, diabetic retinopathy, malignant melanomas** and is highly recommended for anyone with a family history of any of these diseases, is very nearsighted, has any history of trauma or has never had a complete eye exam.

Our doctors strongly encourage every patient to make Digital Retinal Imaging part of their annual eye exam. The fee is only \$12 per eye (most insurance plans that cover routine eye exams do not currently cover this advanced diagnostic testing. However, if your doctor determines, for medical reasons, that Digital Imaging is needed, we will file this service through your medical insurance).

_____ Yes, I wish to have Digital Retinal Imaging

_____ No, I do not want Digital Retinal Imaging but would consent to dilation if necessary.
